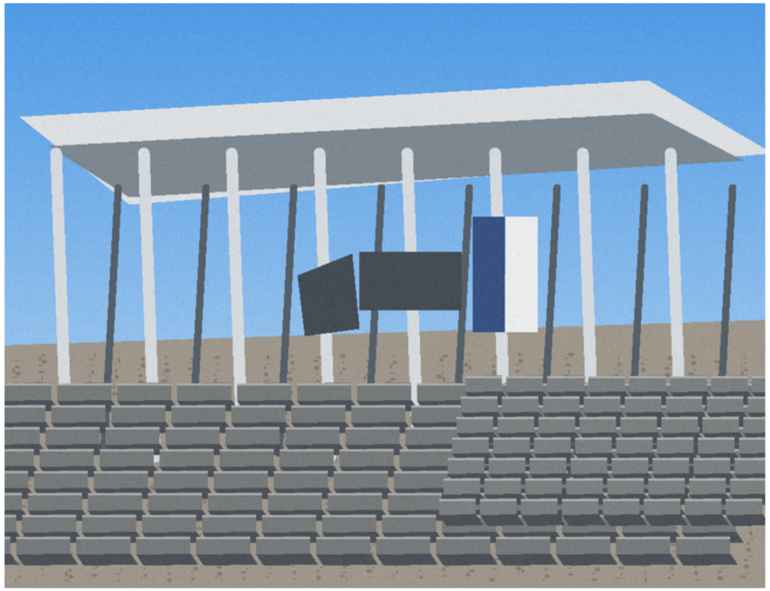
Funding Ask

UGX 130M to launch a lean concrete products factory in Mbarara, Uganda.

- Phase 1 cost: UGX 128M
- Protected buffer: UGX 2M
- Profit target: UGX 20M per month



Founder Story

Hillary Arindamukama is a 25-year-old FAU Clean Energy Processes student building a practical manufacturing venture for Western Uganda.

- International student founder
- Engineering and energy process background
- Mission: jobs, quality, and disciplined production

Problem

Western Uganda construction demand is growing, but supply is fragmented, quality is inconsistent, and delivery reliability is weak.

- Contractors need reliable blocks and pavers
- Hardware stores need predictable supply
- Projects need documented batch quality

Solution

A lean, quality-controlled factory producing blocks, pavers and kerbstones first, then expanding into heavy precast and ready-mix later.

- Batch IDs and test certificates
- Inventory, ERP, QC and market intelligence systems
- Direct-to-site sales and delivery coordination

Phase 1 Products

Manufacture only the essentials first.

- 6-inch hollow blocks
- 8-inch hollow blocks
- solid blocks
- 60 mm pavers
- 80 mm pavers
- kerbstones

Use of Funds

The UGX 130M budget is designed around necessity, not luxury.

- Semi-automatic block/paver machine, mixer, vibrator: UGX 45,000,000
- Starter moulds: 6-inch, 8-inch, solid, 60 mm, 80 mm, kerbstone: UGX 14,000,000
- Site preparation, curing yard, drainage, basic shed works: UGX 14,000,000
- Electrical and water connection setup: UGX 7,000,000
- Pallets, wheelbarrows, hand tools, racks, safety gear: UGX 8,000,000
- Starter raw materials and packaging: UGX 24,000,000

Financial Model

Using the app costing model, the Phase 1 sales scenario reaches the target.

Revenue	Net profit	Target	ROI
UGX 140,020,000	UGX 36,092,578	UGX 20M reached	338.4%

- Monthly revenue: UGX 140,020,000
- Net profit: UGX 36,092,578
- Break-even revenue: UGX 39,334,142
- ROI estimate: 338.4% annualised

Customers and Market

First campaign focuses on Mbarara City and Western Uganda customers with repeat construction demand.

- Contractors
- Hardware stores
- Property developers
- Schools and hospitals
- Fuel stations
- Government projects
- NGOs and churches

Risk Controls

The plan is feasible only if pricing, procurement, curing, credit control and quality testing are managed tightly.

- Quotation risk: Re-verify machinery, raw material and market prices before investment close.
- Cement price volatility: Use supplier comparisons, minimum gross margin rules and bulk purchasing.
- Quality failure: Batch IDs, curing logs, compressive tests and rejection controls from day one.
- Cash collection: Deposits before production, balances before delivery, customer ledger discipline.
- Premature expansion: Defer ready-mix, culverts and heavy precast until cash flow supports them.

Funding Ask and Next Steps

Raise UGX 130M, verify quotations, secure a site, order essential machinery, launch first sales campaign, and report monthly performance.
